

Drumkit / Soundboard

Your challenge is to create a drumkit or soundboard of your choice. Users must be able to play sounds on a mouse click as well as when a key has been pressed.

Requirements for this are

- Minimum of 4 sounds with a max of 12
- Sound must run on a keypress or a click event
- Suitable layout
- Sensible styling
- Viewed by multiple browser sizes (responsive web design)

Some tips for this would be to have a basic design to follow, and for a submission have one member push to github with others cloning the repository for this own.

How can we add the sound?

How can we play the sound?

How can we play a sound when a specific key has been pressed?

Can we spam the button? (bonus points)

Be creative, but make sure sounds use are suitable.
